ecologic flooring

### the 'hard wood' alternative

decodeck<sup>®</sup> is manufactured from a homogeneous mixture of wood and plastics, combining the best properties of both materials. Thanks to its excellent characteristics, new products can be developed that could never be realised in classic timber. Endless design possibilities arise for a wide variety of applications.

The unique combination of wood and plastics guarantees a long life-cycle. Because of its high resistance to moisture, the material will not degenerate like natural timber. decodeck<sup>®</sup> is absolutely free from rotting, splintering and decomposition.

# weather resistant ...

### the decking boards

The decking boards, available in the colours Sahara Brown, Canyon Red, Tobacco Brown, Dark Brown and Caviar Black, are the first products commercialised by Neofibra nv.

decodeck<sup>®</sup> keeps the typical look and touch of wood. By combining wood with plastics, the final product requires very little maintenance for years.

### many advantages

- + Does not warp, splinter, split or flake off.
- + No oiling or painting required, decodeck<sup>®</sup> is absolutely maintenance-free !
- + Keeps its looks for years.
- + Available in 5 different colours.
- + Does not attract insects.
- + Does not rot or decay.
- + Excellent resistance to water and moisture.
- + Easy, accurate and fast installation with decodeck<sup>®</sup> invisible decking clips.
- + Can be processed with classic timber-tools.
- + Feels and looks like natural wood.
- + Is not slippery (wet or dry).
- + Colours will slightly fade shortly after installation, just like natural wood.
- + Is environmental friendly : the decking boards are completely recyclable.
- + Does not contain any harmful elements.

### installation

If decodeck<sup>®</sup> is installed with its special decking clips, a deck can be realised within no time.

To close the cavities of each decking profile, decodeck<sup>®</sup> boards can easily be fit with decorative end caps, available in all 5 decking colours.

sahara brown

canyon red

tobacco brown

dark brown

caviar black

## why choose decodeck® over wood?

Unlike wood, decodeck® has an excellent resistance to water, chemicals and insects. decodeck® requires no special maintenance, there is no need to paint, oil or treat the surface. Furthermore, decodeck® has the benefit not to splinter, crack or decay. Because of its superior properties, decodeck® can now be produced in a range of different shapes and colours.

## does decodeck® contain any harmful elements?

In the production process of the decodeck® product, no harmful or environmental damaging components are used. decodeck® is an environmental friendly product !

## are decodeck® boards slippery?

Because of their structured surface, decodeck® boards are not slippery, neither in wet nor in dry conditions.

# questions and answers

## what equipment should be used to install the decodeck® boards?

The installation of decodeck® does not require any special tools. The product can be processed with standard wood processing tools for drilling, sawing, brushing or planing operations.

## can decodeck® be used as a joist or beam?

No ! decodeck® should not be used as a supporting structure. Special joists/beams are currently under development in the decodeck® material and will be available in the near future.

## can decodeck® be installed directly on a flat supporting surface?

We strongly advise against this. In order to provide a minimum of air-circulation underneath the decking, it is advised to install decodeck® boards on support beams or joists.

## should the decodeck® boards be predrilled before fixing them with screws?

When using traditional screws to fix the decking, it is advised to predrill the boards to allow the screws to sink a maximum in the decking board. To realise a fast, simple and correct installation of the decking, we advise the use of our invisible decodeck® clip system.

## can the decodeck® boards be cleaned with a pressure washer?

Yes. To prevent damage of the surface, a maximum pressure of 80 bar is advised. It is important to follow the score direction when cleaning the surface. Always use a wide beam of water, a dirt 'blaster' nozzle could damage the deck ! If required, a mild cleaning agent can be used.

## what is the influence of salt water on decodeck®?

decodeck® is resistant to salt water and as a consequence, it is suitable for applications where the product has regular contact with salt or sweet water (e.g. pontoons, docks, jetties, ...).

## can decodeck® be painted or oiled?

Although decodeck® does not require any surface treatment, it may be painted in order to obtain a different colour. Before eventual painting, it is advised to give the surface sufficient time to completely weather out (approx. 12 weeks of outdoor exposure).
